IRIS BY STARCK® WIFI CONNECTION.

You can connect to a wireless network.
However, a strong signal on a wireless network does not necessarily mean a faster internet connection. It is better to use a wired connection (RJ45 cable).

1. Open the system menu

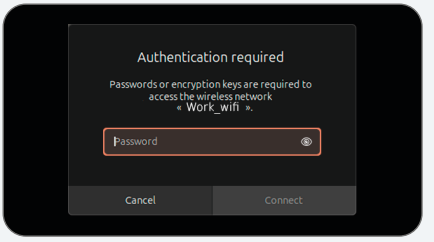
In the top bar, click in the upper-right corner to open the system menu.

2. Select your network

Click "Wi-Fi", then click the name of the desired network in the list.

3. Enter the password

If the network is protected, enter the security key (password) and click "Connect".



4. Check the connection

The icon changes. Once connected, it indicates the signal strength.
